

Secure content collaboration

Bring teams together to securely share files, manage projects and improve processes

HighQ's secure content collaboration platform allows teams to unlock their potential, get their work done and be more productive. Work with colleagues and clients to unify internal and external collaboration from anywhere, on any device, in one complete enterprise collaboration solution.

Secure file sharing

Securely share large document sets in project workspaces or easily transfer large files using our web, desktop and mobile apps.

Project management

Centralise project information and collaboration with agile task management and give your teams the tools to get their work done.

Team collaboration

Allow teams to collaborate and communicate efficiently across offices and timezones and reduce reliance on email.

Knowledge sharing

Free information from knowledge silos such as email, network drives and laptops and share it with others in shared workspaces.

External collaboration

Easily collaborate and communicate with users outside of your network by sharing files, work product and project information.

Enterprise social networking

Break down organisational boundaries and transform communication and information flow across the firm.

Full of enterprise-grade features out of the box

HighQ's secure content collaboration platform is packed full of innovative features right out of the box. It's based around the concept of workspaces where invited users can securely share information and collaborate on projects. Each workspace includes **Files, Wiki, Blog, Tasks, Events, iSheets** and **People** modules. Other features are deeply integrated throughout the application including activity streams, microblogging, private messaging, commenting, liking, notifications, people profiles, search, filters, favourites and tags for a dynamic and engaging experience.

Made for mobile

Designed for desktop, tablet and mobile out-of-the-box, the responsive design provides an optimised experience on any device.

Private cloud

We host the platform in our own private cloud in six data centres around the world. You decide where to store your data and it stays there.

Simple deployment

Let Software as a Service deliver the benefits of rapid deployment, frequent upgrades and easy scaling with no maintenance headaches.

Powerful toolkit

With a modern API, we can fit into your existing infrastructure and integrate with key enterprise systems such as SharePoint, Active Directory and SQL Server.

An amazing user experience

The consumer-grade user interface and design, combined with enterprise-grade technology, provides a powerful and intuitive end user experience.

Single-tenancy

We provide you with your own dedicated instance, so you get to choose how it's configured, when you upgrade and how it's branded.

Enterprise-grade security

Built for the enterprise, independently tested and ISO27001 certified so you have the high-grade security and control you need for your sensitive data.

Infinite possibilities

The combined benefits of the powerful feature set reduce cost, administration and integration overheads and simplify your business and technology landscape.
